

Tricefy and GE Vscan Helping to Save Lives in the Air

Last Modified on 08/20/2020 12:47 pm EDT

The Geisinger Life Flight crew uses GE Vscan Extend handheld ultrasound along with Tricefy to help save lives in the air.

"The Vscan automatically uploads the image to the Tricefy cloud, the crew can help evaluate the patient and help get the information to the doctors at the hospital prior to them getting there. If we get that information to the Emergency Department doctors and those trauma teams, to the surgeon... we'll save lives."

Click here to see how portable ultrasound together with Tricefy can save lives.
