

Dr. Tierney Use Cases: Using Tricefy Technology to Advance Medical Education

Last Modified on 11/17/2020 6:07 am EST

At Abbott Northwestern Hospital in Minneapolis, MN, Dr. David Tierney, Director of the Internal Medicine Bedside Ultrasound program, has created the largest imaging database of its kind, with many different real-life examples of POCUS images. This is not only a great resource from a learner and educational standpoint - but also for AI as technology moves forward and machine learning becomes a bigger part of point of care ultrasound. See how Dr. Tierney uses Tricefy technology together with the IMBUS program to revolutionize medical education.
